ALL-IN-ONE STUDENT OPERATING ENVIRONMENT

Productometer

An ultimate destination built for students to track and master their entire 24-hour day—**Studies, Health, Screen Time, and Sleep cycle**.

Why Productometer is Created

Most students today juggle 4 to 6 disconnected apps (a Pomodoro timer, a calendar, a habit checklist, a workout app, and a sleep alarm). Worse, conventional app blockers fail because they lock phones completely, creating frustration that leads students to uninstall the blocker within 48 hours. **Productometer replaces willpower with smart, friendly architecture**—connecting your daily academic goals, physical movement, healthy screen limits, and restful bedtime sleep into one cohesive system that works completely offline.

THE 4 CORE LIFE DOMAINS MASTERED BY PRODUCTOMETER

1. Academics & Focus

Lecture-safe study sessions that let you watch educational tutorials freely while preventing rabbit holes.

2. PulseFit Health

Built-in step pedometer, active calorie targets, and 40+ workout guides to keep body energy high.

3. Screen Management

Ground-truth automated screen time tracking from midnight with the friendly 1-Reel Grace Rule.

4. Sleep & Recovery

Circadian Bedtime Shield that dims blue light 15 minutes before bed, plus smart wake-up alarms.

Why Does Productometer Need Phone Permissions?

A brief and transparent guide to the 4 essential permissions requested from your smartphone.

1. Accessibility Permission

`Shorts & Reels Guardian`

Why it's needed: To gently detect when YouTube Shorts or Instagram Reels open on your screen. This powers our *1-Reel Grace Rule*, giving you 30 seconds to enjoy an isolated video before helping you step out of endless scrolling.

100% Safe: Never reads chats, passwords, or personal messages. Only detects short-form video screens.

2. Usage Access Permission

`Automatic Screen Time`

Why it's needed: To automatically calculate the exact minutes and hours you spend on apps from 00:00 midnight to right now. This completely eliminates manual typing or daily guessing.

100% Safe: Reads only the phone's internal usage counter. No personal files or browsing histories are touched.

3. Alarms & Notifications

`Exact Timers & Waking Alarms`

Why it's needed: To allow study session countdowns, rest reminders, and morning wake-up alarms to ring reliably at the exact second, even when the phone enters deep power-saving mode.

100% Safe: Rings strictly for your scheduled tasks and automatically survives device reboots.

4. Physical Activity Sensor

`Built-in Step Pedometer`

Why it's needed: To track your daily walking steps and physical movement using your phone's built-in step counter sensor, helping you balance prolonged desk study with healthy physical activity.

100% Safe: Uses low-power hardware step counting (< 0.02% battery/hr) with zero GPS tracking.

Zero-Cloud Offline Privacy Guarantee

Unlike commercial apps that sell your browsing habits to advertisers, **Productometer is 100% self-contained**. All your study schedules, screen statistics, and health metrics are saved securely inside your phone's encrypted memory. No accounts, no logins, and zero data ever uploaded to the cloud.

Feature 1 :Day Planner

Schedule your entire 24-hour day in effortless touch swipe painting.

Automatic Hardware Wake Alarms

Every scheduled block automatically configures an exact Android alarm that rings on time to keep you disciplined, waking the phone screen even in deep battery sleep.

Survives Phone Reboots

If your phone runs out of battery or restarts overnight, Productometer automatically restores all your planned task alarms the moment the phone turns back on.

Direct Activity Point Rewards

Completing your scheduled day blocks awards **+50 execution points** toward your daily Net AP score, turning time discipline into a fun daily achievement.

Real App Display: 48-Slot Matrix Planner

Feature 2: The 1-Reel Grace Rule

Why traditional app blockers fail—and how our friendly state machine protects your attention.

✕ Traditional Blockers (The Flaw)

Lock apps completely. If a classmate sends an important video link, you can't view it. Users get annoyed and uninstall the blocker within 48 hours.

✓ Productometer 1-Reel Grace (The Solution)

Permits the 1st short with a gentle 30-second reminder. Only intervenes when you swipe consecutively into algorithmic doomscrolling.

HOW THE 1-REEL GRACE STATE MACHINE WORKS IN PRACTICE

STEP 1

1st Short Allowed (Grace Period)

You open YouTube Shorts or Instagram Reels. The app detects it and shows a friendly toast: *"1 Reel Allowed • 30s Grace Active"*. Watch what you need without interruption.

STEP 2

2nd Consecutive Swipe (Intervention HUD)

If you swipe up again to start scrolling uncontrollably, a soft audio reminder sounds and a clean **5-second countdown HUD** appears over the video.

STEP 3

Automatic Return to Study Notes

At 0 seconds, the app automatically triggers a smooth back navigation, bringing you right back to your notes or study session with zero lost work.

30-Second Emergency Override Pass

Have an urgent message to check or need to copy something quickly? Simply tap **"Emergency Pass"** to receive an immediate 30-second window before focus monitoring re-engages.

Feature 3: Academics & Lecture Security

Learn freely on YouTube without falling into algorithmic entertainment traps.

Whitelists Educational Videos

Students rely on online video lectures to learn. Productometer inspects video titles for keywords like *lecture, tutorial, class, coding, physics, exam* and allows uninterrupted full-screen playback.

15-Second Casual Video Reminder

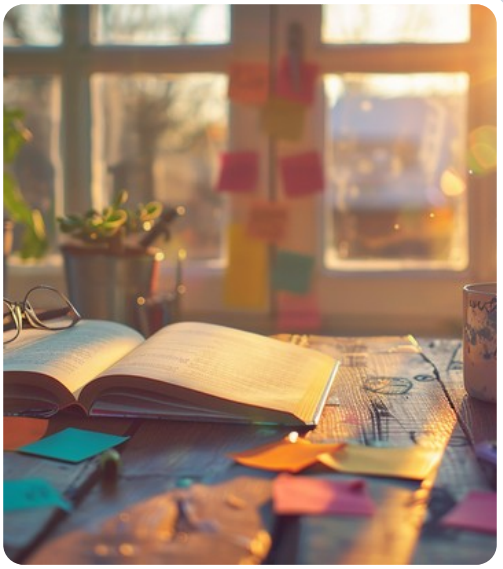

If you click on non-educational entertainment (gaming streams, reaction vlogs) during an active study session, a gentle 15-second grace timer prompts you to stay on track before issuing an alert.

Ongoing Status Bar Countdown Ticker

Your study Pomodoro session runs as an ongoing notification ticker in your phone's status bar, showing time remaining and focus points earned without getting killed by the phone's memory.

Direct +100 Points per Study Hour

Every hour spent in verified deep study adds **+100 points** directly to your daily score, incentivizing consistent academic focus.

Real App Display: Academic Focus Session

Feature 4: Automated Screen Management

True foreground device consumption calculated automatically from midnight with smart color psychology.

Calculated From Midnight to Now

Never waste time manually starting timers. Productometer automatically streams exact foreground app minutes from 00:00 midnight to the current second.

App Icons & Real App Names

Displays crisp native app icons and names (e.g. YouTube, WhatsApp, Instagram) with exact minutes spent and total Shorts swipe counts side by side.

STRICT COLOR PSYCHOLOGY RULES:

Calm Blue & Emerald Green (Healthy Usage):
Normal daily usage and study applications display in peaceful, encouraging tones.

Warm Amber (Attention Needed):
Highlights when non-academic screen scrolling begins to creep upward.

Strict Red Alert (Excessive Limits Only):
Reserved strictly for when entertainment screen time crosses high limits (> 3.5 hrs) or triggers doomscroll warnings.

Real App Display: Screen Time Dashboard

Feature 5 & 6: Health, Sleep & AI Coach

Physical energy drives academic excellence—step tracking, nighttime blue-light shields, and AI assistance.

PulseFit Health

Step Pedometer: Automatically counts daily steps using your phone's built-in motion sensor with under 0.02% battery drain per hour.

Active Calorie Targets: Estimates daily calories burned to ensure your body is fueled for long study blocks.

40+ Exercise Guides: Built-in video form guides for safe stretching, bodyweight exercises, and gym routines.

Circadian Sleep Shield

15-Min Bedtime Barrier: Engages 15 minutes before your planned sleep, dimming blue light to protect your natural melatonin and sleep quality.

Smart Morning Alarms: Configures loud, reliable wake-up alarms that ensure you get 7-8 hours of memory-consolidating sleep.

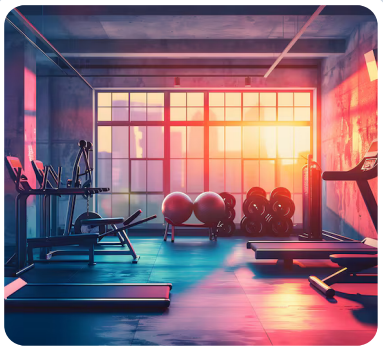

Sleep Bonus: Meeting your sleep targets awards positive bonus points to your daily productivity score.

Producto AI Coach

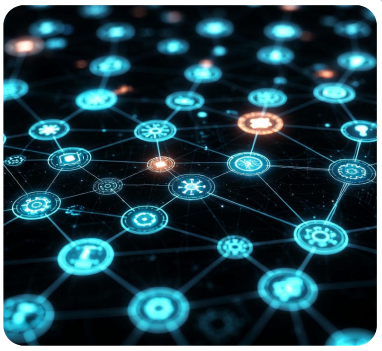

Syllabus Chunking: Takes intimidating multi-chapter course syllabi and breaks them down into realistic 30-minute study blocks.

Cognitive Debriefs: Detects mental fatigue after long study marathons, recommending water, stretches, and break intervals.

Schedule Advice: Helps you balance heavy exam study with daily gym and sleep.

PulseFit Health: Workouts & Steps

Circadian Sleep Shield & Alarms

Feature 7: Gamified Productivity & Conclusion

A balanced scoring formula that rewards healthy consistency instead of toxic burnout.

HOW YOUR DAILY PRODUCTIVITY SCORE (NET AP) IS CALCULATED

Net Score = Study Points + Workout Bonus + Completed Tasks − Screen Time Deductions

+100 Points / Hour
Earned for deep, uninterrupted academic study.

+Bonus for Workout
Rewards 1–2h exercise (diminishes beyond to deter overtraining).

+50 Points / Task
Bonus for every planned Day Planner block executed.

−Screen Deductions
Deductions for excessive non-productive entertainment scrolling.

OPERATIVE DISCIPLINE TIERS

NOVICE
< 150 AP
Screen scrolling exceeds study. Focus guardian recommended.

FOCUSED
150 – 300 AP
Core study met. Consistency in planning or workout needed.

DISCIPLINED
300 – 480 AP
3+ hrs study, daily workout, and tight screen time caps.

TITANIUM
≥ 480 AP
All planned blocks done, zero doomscrolling, full 8h sleep.

Examiner Defense & Project Takeaways

Complete Offline Autonomy: 100% private, self-contained local storage with zero cloud tracking servers.

Negligible Battery Overhead: Total background battery impact benchmarked at under 1.8% per 24 hours.

Human-Centered Discipline: The 1-Reel Grace Rule and Lecture Security respect real student needs, preventing the typical 48-hour uninstallation cycle of conventional blockers.
